RESEARCH INTEREST

- Artificial Intelligence
- Machine Learning
- Computer Vision
- Deep Learning
- Natural Language Processing

EDUCATIONAL QUALIFICATION

North South University, Dhaka, Bangladesh

Bachelor of Science in Computer Science and Engineering (BSCSE) | 2019 - 2022

CGPA: 3.82 (out of 4.00)

EXPERIENCE

Research Assistant

North South University, Supervisor: Dr. Mohammad Ashrafuzzaman Khan | September 2023 - Present

- Conducting research on the application of Natural Language Processing (NLP) in the medical domain.
- Currently leading a project that focuses on developing an NLP-based assistive tool for performing automatic differential diagnosis.
- Published our findings as an Arxiv preprint entitled "Automatic Differential Diagnosis using Transformer-Based Multi-Label Sequence Classification."

PROJECTS

Automatic Differential Diagnosis using Transformer-Based Multi-Label Sequence Classification.

Supervised by: Dr. Mohammad Ashrafuzzaman Khan

- Developed a data processing method to convert the tabular patient data from a medical dataset and engineer them into patient reports, which are then used for multi-label classification (MLC).
- Developed a pipeline to fine-tune encoder-based transformer models (such as BERT, DistilBERT, RoBERTa, and Bio-BERT) and performed automatic differential diagnosis using MLC.
- Designed custom behavioral tests to further stress test the trained models in order to get a better understanding of their capabilities.

LMFLOSS: A Hybrid Loss For Imbalanced Medical Image Classification.

Undergraduate Capstone Project | Supervised by: Dr. Nabeel Mohammed

- Developed and implemented a novel hybrid loss framework (LMFLOSS) to handle the imbalance issue in medical image classification.
- Compared and analyzed the performance of different existing loss functions for imbalanced classification on multiple CNN network architectures.
- Extracted features from deep neural networks and generated attention maps, t-SNE, and UMAP projections for further analysis and understanding of the results.

An end-to-end pollution analysis and detection system using artificial intelligence and object detection algorithms.

Supervised by: Dr. Mohammad Rashedur Rahman

- Created a custom 'Visual Pollutant Dataset' by collecting images from Google Street View.
- Annotated the image data and trained object detection models for the task of visual pollution detection.
- Published our preliminary findings under the title "Visual Pollution Detection Using Google Street View and YOLO" at the **2021 IEEE 12th Annual Ubiquitous Computing, Electronics & Mobile Communication Conference (UEMCON)**.
- An extension study of the conference article with the title "An end-to-end pollution analysis and detection system using artificial intelligence and object detection algorithms" was later published in the **Decision Analytics Journal**.

A Comparative Study on Plant Diseases Using Object Detection Models.

Supervised by: Dr. Ziaul Hossain

- Performed detailed comparative analysis of the performance of different object detection models for plant disease detection.
- Preprocessed and annotated image data from two datasets to prepare a hybrid dataset suitable for the study.
- Trained multiple variants of YOLO(You Only Look Once), such as YOLOv5-s, YOLOv5-x, and Scaled YOLOv4.
- A paper based on this study was recently accepted at the **12th Computing Conference 2024**.

TECHNICAL SKILLS

Languages: Python, Java, PHP, Javascript, C, C++

Frameworks: PyTorch, Laravel, Tensorflow

Python and ML Libraries: Scikit-learn, Hugging Face, OpenCV, Numpy, Pandas, Matplotlib, NLTK

Database: MySQL, SQLite

Version Control: Git, Github

Project Management Tools: Trello, Slack, Overleaf

RELEVANT UNDERGRADUATE COURSEWORK

Artificial Intelligence, Data Mining, Natural Language Processing (Special Topics), Data Structure & Algorithm, Design and Analysis of Algorithms, Introduction to Theory of Computation, Database Management System, Digital Logic, Discrete Mathematics, Computer Organization and Architecture, Operating Systems Design, Software Engineering, Concepts of Programming Language, Microprocessor Interfacing & Embedded System
