ABOUT ME

Enthusiastic Computer Science and Engineering graduate with a keen interest in Natural Language Processing, Deep Learning, and Computer Vision. Experienced in implementing image classification, object detection, and NLP tasks using deep neural networks and transformer architectures. Actively seeking newer opportunities to apply my technical skills, collaborate with experts, and contribute to advancements in the field of Artificial Intelligence.

RESEARCH INTEREST

- Machine Learning
 - Artificial Intelligence
 - Computer Vision
 - Deep Learning
 - Natural Language Processing
-

EDUCATIONAL QUALIFICATION

North South University, Dhaka, Bangladesh

Bachelor of Science in Computer Science and Engineering (BSCSE) | 2019 - 2022
CGPA: 3.82 (out of 4.00)

EXPERIENCE

Research Assistant

North South University, Supervisor: Dr. Mohammad Ashrafuzzaman Khan | September 2023 - Present

- Conducted research on the application of Natural Language Processing (NLP) in the medical domain.
 - Converted and cleaned a complex JSON dataset of full-text medical research articles into a structured SQLite database to improve data accessibility and analysis.
 - Currently working on a project that focuses on developing an NLP-based assistive tool for performing disease diagnosis from medical text.
-

PROJECTS

LMFLOSS: A Hybrid Loss For Imbalanced Medical Image Classification.

Undergraduate Thesis | Supervised by: Dr. Nabeel Mohammed

- Developed and implemented a novel hybrid loss framework (LMFLOSS) to handle the imbalance issue in medical image classification.
- Compared and analyzed the performance of different existing loss functions for imbalanced classification on multiple CNN network architectures.
- Extracted features from deep neural networks and generated attention maps, t-SNE, and UMAP projections for further analysis and understanding of the results.

An end-to-end pollution analysis and detection system using artificial intelligence and object detection algorithms.

Supervised by: Dr. Mohammad Rashedur Rahman

- Created a custom 'Visual Pollutant Dataset' by collecting images from Google Street View.
- Annotated the image data and trained object detection models for the task of visual pollution detection.
- Published our preliminary findings under the title "Visual Pollution Detection Using Google Street View and YOLO" at the **2021 IEEE 12th Annual Ubiquitous Computing, Electronics & Mobile Communication Conference (UEMCON)**.
- An extension study of the conference article with the title "An end-to-end pollution analysis and detection system using artificial intelligence and object detection algorithms" was later published in the **Decision Analytics Journal**.

A Comparative Study on Plant Diseases Using Object Detection Models.

Supervised by: Dr. Ziaul Hossain

- Performed detailed comparative analysis of the performance of different object detection models, for plant disease detection.
- Preprocessed and annotated image data from two datasets to prepare a hybrid dataset suitable for the study.
- Trained multiple variants of YOLO(You Only Look Once), such as YOLOv5-s, YOLOv5-x, and Scaled YOLOv4.
- A paper based on this study was recently accepted at the **12th Computing Conference 2024**.

TECHNICAL SKILLS

Languages: Python, Java, PHP, Javascript, C, C++

Frameworks: PyTorch, Laravel, Tensorflow

Python and ML Libraries: Scikit-learn, Hugging Face, OpenCV, Numpy, Pandas, Matplotlib, NLTK

Database: MySQL, SQLite

Version Control: Git, Github

Project Management Tools: Trello, Slack, Overleaf

RELEVANT COURSEWORK

Artificial Intelligence, Data Mining, Natural Language Processing (Special Topics), Data Structure & Algorithm, Design and Analysis of Algorithms, Introduction to Theory of Computation, Database Management System, Digital Logic, Discrete Mathematics, Computer Organization and Architecture, Operating Systems Design, Software Engineering, Concepts of Programming Language, Microprocessor Interfacing & Embedded System
